Profile

A passionate, hard working full-stack engineer who like challenges and solving real world problems by writing a clean, well-tested code to ensure sustainability of built applications.

Work experience

04/2020 – present

Front End Engineer Panavis, Kigali, Rwanda

My day to day responsibilities at Panavis are designing UI mockups with tools like Figma, and then Implementing features with React/Redux and Webpack, Testing them with Jest/Enzyme before delivering them. After that, I seek and receive feedback for things which can be improved. Sometimes I do also make research before designing or implementing a feature.

11/2019 – 04/2020

Full Stack Software Engineer Andela, Kigali, Rwanda

As a Software Engineer, I was responsible for participating or leading my team in sprint planning, clearing PT board stories by implementing features, having a demo at the end of sprint with Product Owner so that he can accept delivered features or giving us feedback where improvement is needed to ensure good quality of a product.
